

Multi-Column Regions

Full-measure prose before the region, so the fixture shows the surrounding text is NOT columnised — a regression that columnises the whole page would otherwise look correct.

Sentence 1 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous.^[1] Sentence 2 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 3 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 4 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 5 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 6 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 7 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 8 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 9 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 10 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 11 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 12 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 13 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 14 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 15 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 16 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 17 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Sentence 18 of the columnised region, long enough to wrap within a narrow measure and make the column boundaries unambiguous. Full-measure prose between the two regions.

Sentence 1 of the three-column region. Sentence 2 of the three-column region. Sentence 3 of the three-column region. Sentence 4 of the three-column region. Sentence 5 of the three-column region. Sentence 6 of the three-column region. Sentence 7 of the three-column region. Sentence 8 of the three-column region. Sentence 9 of the three-column region.	Sentence 10 of the three-column region. Sentence 11 of the three-column region. Sentence 12 of the three-column region. Sentence 13 of the three-column region. Sentence 14 of the three-column region. Sentence 15 of the three-column region. Sentence 16 of the three-column region. Sentence 17 of the three-column region.	Sentence 18 of the three-column region. Sentence 19 of the three-column region. Sentence 20 of the three-column region. Sentence 21 of the three-column region. Sentence 22 of the three-column region. Sentence 23 of the three-column region. Sentence 24 of the three-column region.
--	---	---

Full-measure prose after the page-spanning region, which must sit directly beneath its final line rather than being pushed onto a page of its own.

[1] Raised from inside a columnised region. The region is measured before it is drawn, and a conversion registers footnotes on the shared document, so this must appear ONCE and carry the first number.
